

singled out. The Royals calculate that “a switch from beef to beans in the diets of the entire U.S. population could free up ... 42% of U.S. cropland—for other uses such as ecosystem restoration or more nature-friendly farming.”

Second: Land must be taken out of farming, “protected and set aside for Nature.” Not on any small scale, either:

This will typically require significant areas of land to be left or managed for nature, primarily because the extinction risk for any species grows as its population size shrinks, and because many large animals require a large area of habitat to sustain an adequate population.

Third: Farming must be transformed; there must be a forced reduction of the inputs used in modern farming, including of the machinery which has freed men and women from backbreaking labor in the fields.

No one “lever” will work without the others, they repeat, but “dietary change”—reducing “food demand”—is “essential in order to preserve existing native ecosystems and restore those that have been removed or degraded.”

Deutscher Bauernverband

*The RIIA admits the monarchy’s intent is to raise the cost of food worldwide, and forcibly reduce world food production permanently, “in support of Nature.” Shown is a large farmer protest in Berlin on November 26, 2019.*

Since most of humanity will never voluntarily accept such policies, “global guidelines in policy areas such as responsible investment, dietary change and nature-based climate change mitigation solutions” are required. “Incentives” and “responsible investment”—cutting credit to modern farming, as also to modern forms of energy—will be necessary. Such are the proposed measures of the RIIA to the series of international conferences and summits scheduled for 2021 on “food systems and biodiversity,” and the first “UN Food Systems Summit” later in the year.

## WEF’s ‘Mission Possible’ Targets The Building Blocks of Human Society

by Mark Bender

Feb. 1—The World Economic Forum (WEF), dominated in its recent conferences by Prince Charles, Mark Carney and Klaus Schwab, is the leading motivator of a new coalition of business and institutional powers which is now aiming

to break down the very building blocks of human economy. The emergence of this coalition, aimed directly to target the primary elements of industrial production as “carbon polluters,” illustrates how these oligarchical forces work.

Launched January 27 directly from the WEF’s five-day conference for the so-called “Great Reset,” the Mission Possible Partnership has set its sights on “decarbonizing” the cement, steel, aluminum and chemical industries, “as well as the ships, planes, and trucks that move them.”

Joining the WEF in this triage of humanity is its executive arm, the [Energy Transitions Commission](#), led by Lord Adair Turner of Ecchinswell, with 50 “commissioners” from the largest financial and multi-national institutions of Western society; the *Rocky Mountain Institute*, founded in 2004 and “globalized” through merger with Richard Branson’s *Carbon War Room* in 2014; and the *We Mean Business* coalition of globalized companies.

“If business continues as usual, by 2030 these global industries will exceed the total amount of carbon the world can emit this century based on a 1.5°C carbon budget,” these oligarchs pronounce. Therefore,

Our goal is to propel a committed community of CEOs from carbon-intensive industries, together with their financiers, customers and suppliers, to agree—and more importantly, to act—on the essential decisions required for decarbonizing industry and transport *in this decade*. We are orchestrating high-ambition disruption through net-zero industry platforms for seven of the world’s most carbon-intensive sectors.” [Emphasis added.]

Clearly these vital industrial sectors will have nowhere near their productive value if they are drastically “decarbonized.” As noted in this white paper, a chapter on the future of steel, written for the WEF by the think-tank SYSTEMIQ, forecasts a dramatic worldwide drop in steel production over the rest of this century, associated with the suppression of carbon fuel burning in steelmaking.

According to its [launch statement](#) on the WEF website:

The Mission Possible Partnership will be the delivery mechanism for Race to Zero Breakthroughs in hard-to-abate sectors. These are specific near-term tipping points for each sector of the global economy in the race to net

WEF/Sikarin Fon Thanachaiary

*Lord Adair Turner of Ecchinswell, Co-Chair, Energy Transitions Commission: “Our goal is to ... decarbonize industry and transport in this decade.”*

zero emissions, being launched by COP26 President Alok Sharma and U.S. Special Presidential Envoy for Climate John Kerry as part of the Davos Agenda. In late 2021, the Partnership will aim to showcase net-zero agreement breakthroughs in shipping, aviation, and steel. Within three years, it plans to help companies complete climate action agreements in these sectors as well as trucking, chemicals, cement, and aluminum.

So it is not “only” electric power generation, fossil fuel heating, and chemical fertilizers in agriculture which are under the “Great Reset” attack; it is the entire range of the most important industries of modern developed economies. This is hard-core Malthusianism of the oligarchical thinkers and agents directly around Prince Charles and City of London financiers. The Mission Possible Partnership claims to have over 300 multinational corporations already “on board,” whatever that currently means. From the tenor of the launch, those who don’t join (or step aside) will be destroyed through “defunding” or other options available to global oligarchs.

### III. ‘Green Finance’ Is BlackRock, Inc.

---

# ‘Green Finance’ Hatchet Deployed To Reduce Population Everywhere

The British Malthusian oligarchy—controlling Mark Carney, former governor of the Bank of England, and others of the world’s main central bankers, and some of the most powerful asset managers, and bringing in political leaders like Joe Biden to push the “green new deal”—this oligarchy has now the most lethal weapon in its hands to impose massive austerity and reduce world population. It can shut down all financial flows going to life-sustaining fossil fuels and nuclear power.

On the front lines of these financial hatchet men is BlackRock, Inc., the world’s largest wealth management firm with more than \$8 trillion dollars under its control.

Mike Billington tracks the methods used by BlackRock to force companies in the developing and advanced sectors to abandon fossil fuels and move to “renewables.” Karel Vereycken describes the rise to power of this mega-asset manager and its infiltration of the new Biden administration.

## BlackRock, Inc.: How ‘Green Finance’ Forbids Modern Fuels

by Mike Billington

Jan. 30—Under the guise of “anthropogenic climate change”—the Big Lie that industrial and agricultural carbon emissions are the cause of global warming—BlackRock is leading the way in forcing companies and nations to shut down fossil fuel energy production, especially coal. As most poor nations and many advanced nations depend primarily on coal for electricity generation—and given the current pandemic, and the famine threatening Africa and other areas of the world—these actions to force the shut-down of coal-fired plants constitute an important aspect of the deadly Malthusian effort to reduce the world’s population—i.e., it is an act of genocide.

BlackRock CEO Larry Fink announced in January 2020 that the firm would divest itself of any company which generated more than 25% of revenue from coal, along with other measures to force the closure of fossil fuel companies, and prevent the construction of coal-fired power plants, as it did in forcing Peabody Coal in

the United States back into bankruptcy. BlackRock threatened not only to disinvest, but that it might use its considerable influence to fire executives and members of boards of directors who would not follow such orders.

Fink’s 2021 [annual letter](#) to CEOs made this evil destruction of energy generation, in rich and poor countries alike, appear to be its “responsibility” as fiduciaries to the richest of the rich (BlackRock’s clients), to maximize financial returns, arguing that fossil fuel companies and other industries which have a large “carbon footprint” were losing equity value due to the supposedly popular belief that they are harmful to society. The question of which is the cause and which is the effect is obvious, as the rest of this Special Report makes clear.

### Forbidding Coal Power

In May 2020, BlackRock informed KEPCO, the very large Korea Electric Power Corporation, major-
